Hippocampus − Top 20 Significant GO Pathways

activated

suppressed

DNA−binding transcription repressor activity, RNA polymerase II−specific
T cell activation
T cell mediated immunity
adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfamily domains
antigen processing and presentation of peptide antigen
asymmetric synapse
brain development
carboxylic acid catabolic process
cell killing
cellular response to biotic stimulus
cellular response to type II interferon
chromatin
chromatin binding
chromatin remodeling
defense response to bacterium
defense response to virus
endocytosis
external side of plasma membrane
fatty acid metabolic process
immune response−regulating signaling pathway

Male Dp16 vs WT
Male APP2N vs WT
Male Dp16 vs APP2N
Female Dp16 vs WT
Female APP2N vs WT
Female Dp16 vs APP2N
